Development of the Student Tutor Website was carried out using a methodical planning process to ensure that each of the requirements was met efficiently.

The Initial Research Conducting extensive research on modern tutoring website structures, Examining competing websites for adopting best practices, Gathering ideas and structural requirements for educational websites, Creating detailed project specifications based on assignment requirements. Wire framing and Structure Planning: Developing wireframes for all of the five pages (Home, About, Projects, Blog, Contact), Planning user flow and information architecture, Developing a uniform navigation pattern across all of the pages, Establishing a content hierarchy and placement of key elements.

Target Audience, The website primarily targets prospective students requiring tutoring services and parents making the last minute decision on education spending. Our tutoring service targets: High School students aged between 14-18 years: In need of subject-specific tutoring to prepare them for exams, enhance grades and overall knowledge of the subjects [ English, maths, physical science and accounting] and Parents of Students: Seeking reliable, experienced tutors for their children. Colour Scheme: Dark blue, blue, white, purple. Typography: Headings: used a 'Poppins' font for modern, clean appearance and readability as well as for use by children and adults. Body Text: 'Sans-serif' for optimal legibility on any device and screen size. Font Hierarchy: Clear contrast between H1, H2, H3 headings for content organization and readability

Layout Principles: display styling: we Utilized CSS Grid and Flexbox for a responsive, organized layouts throughout the site, Consistency: consistent header, footer, and navigation on all pages ,use of margin and padding to prevent visual clutter ,Responsive design ensuring viewing on all devices

Visual Elements: Images: Optimized, high-quality photos on adobe Photoshop ,Icons: Font Awesome icons for identification and visual appeal of our social media handles, Buttons: Consistent styling with hover effects for improved user experience

Challenges Responsive Design Implementation the Problem that we faced was Maintaining layout integrity on different screen sizes in order to attain a Consistent user experience on mobile, tablet, and desktop devices. Template Consistency the Problem was maintaining a uniform design on all five pages. Image Optimization the Problem was that we had Large image files with a negative effect on page load times but we managed to Compressed images using Adobe Photoshop to retouch our photos and getting Improved performance at no visual quality expense.
